SUMMARY

Software engineer with a strong background in building enterprise-scale web applications and technical expertise in a range of front-end/back-end technologies.

PROFESSIONAL EXPERIENCE

LeafLink

Software Engineer I

January 2022 - January 2023

- Developing the LeafLink B2B SaaS platform by contributing code, providing technical advice and evaluations, mentoring and ensuring the ability to deliver key results reliably.
- Building api-driven user experiences, product enhancements and development processes required to support the LeafLink application at scale.
- Contributing to organizational and technical documentation, bug tracking/ticketing, writing tests and documenting strategies, code reviews and agile / scrum rituals for the LeafLink platform.
- Utilizing tools and languages like javascript / typescript, vue, django, git, aws and docker to maintain LeafLink applications and libraries that need high availability.

LeafLink

Associate Software Engineer

June 2021 - December 2022

- Responsible for developing, testing, deploying, maintaining, and improving various technical solutions for the LeafLink B2B SaaS platform which includes LeafLink Marketplace, LeafLink Finance and LeafLink UI component library.
- Working closely with product and design teams to develop creative solutions to support our customer base across the LeafLink platform.
- Utilizing tools and languages like javascript / typescript, vue, django, git, aws and docker to maintain LeafLink applications and libraries that need high availability.

Popshap

Solutions Engineer

June 2020 - June 2021

- Developing and delivering mobile application "950" on the iOS app store.
- Responsible for designing, developing, testing, deploying and maintaining various technical solutions to ensure deliverability.
- Practicing scrum / agile rituals to collaborate with product and operation to identify and drive requirements for all stakeholders.
- Utilizing tools like react native, typescript, git, google cloud to maintain software that needed high availability.

Dow Jones

Software Engineer

July 2018 - April 2020

- Responsible for building, maintaining and scaling multiple high traffic applications including but not limited to Risk & Trade compliance, MarketWatch, Wall Street Journal, Barrons and more.
- Utilizing tools like react, aws, jenkins, Artifactory and docker to maintain applications that needed high availability.
- Building and maintaining end-to-end web testing applications using cypress.
- Practicing scrum / agile rituals to collaborate with product and operation to identify and drive requirements for all stakeholders.

Brooklyn College ITS

Field Technician

July 2016 - September 2017

- Maintaining large-scale public access computing facilities, supplemented by departmental discipline-specific labs and electronic classrooms.
- Resolving network issues and assisting clients with troubleshooting equipment and providing technical support for hardware, software, LAN equipment and cabling throughout the campus and other college properties.
- Handling ticketing systems; creating tickets, assigning tickets, troubleshooting and documenting processes.

EDUCATION

Pursuit

10-month project based full-stack web development curriculum

2018

CUNY LaGuardia Community College

Classes towards A.S Computer Science

2016
